

Using Light Detection and Ranging (LIDAR)

Reason to use: Sometimes additional information can be picked up regarding a potential cemetery location or to show the actual size of a cemetery.

MD iMAP Topography Viewer

<https://geodata.md.gov/topoviewer/>

There are many components to this so you need to play around with what works best for your needs.

On right side:

Elevation Layers and the sub-category of "Local Hillshade", select the county desired.

Under **Base Maps and Overlays**, click on "Imagery" and "Topographic".

Under **Tools**, fill in the address in the box toward the bottom. Sometimes a GPS location can be used instead of an actual address.

Click on the double up arrows to return to the categories.

Under Tools click on the slider scale

In the top right corner in red pick the middle icon to create layers.

Move the slider back and forth to change the view from LIDAR to current aerial view.

Click on the map to show the elevation, slopes
